

Lab Assignment NO 4

AIM:-

Create a Linear Regression Model using Python/R to predict home prices using Boston Housing

Dataset (<https://www.kaggle.com/c/boston-housing>). The Boston Housing dataset contains

information about various houses in Boston through different parameters. There are 506 samples

and 14 feature variables in this dataset.

The objective is to predict the value of prices of the house using the given features

```
import pandas as pd
import numpy as np
import matplotlib.pyplot as plt
```

```
x=np.array([95,85,80,70,60])
y=np.array([85,95,70,65,70])
```

```
model=np.polyfit(x, y, 1)
```

```
model
```

```
array([ 0.64383562, 26.78082192])
```

```
predict=np.poly1d(model)
predict(65)
```

```
68.63013698630137
```

```
y_pred= predict (x)
y_pred
```

```
array([87.94520548, 81.50684932, 78.28767123, 71.84931507,
65.4109589 ])
```

```
from sklearn.metrics import r2_score
r2_score(y, y_pred)
```

```
0.4803218090889326
```

```
y_line= model[1] + model[0]*x
plt.plot(x, y_line, c='r')
plt.scatter(x, y_pred)
plt.scatter(x, y, c='r')
```

```

dataset\n-----\n\n**Data Set Characteristics:**\n
\n    :Number of Instances: 20640\n\n    :Number of Attributes: 8
numeric, predictive attributes and the target\n\n    :Attribute
Information:\n        - MedInc            median income in block group\n
- HouseAge        median house age in block group\n        - AveRooms
average number of rooms per household\n        - AveBedrms average
number of bedrooms per household\n        - Population    block group
population\n        - AveOccup        average number of household
members\n        - Latitude        block group latitude\n        -
Longitude        block group longitude\n\n    :Missing Attribute Values:
None\n\nThis dataset was obtained from the StatLib repository.\n https:
//www.dcc.fc.up.pt/~ltorgo/Regression/cal_housing.html\n\nThe target
variable is the median house value for California districts,\n
expressed in hundreds of thousands of dollars ($100,000).\n\nThis
dataset was derived from the 1990 U.S. census, using one row per
census\nblock group. A block group is the smallest geographical unit
for which the U.S.\nCensus Bureau publishes sample data (a block group
typically has a population\nof 600 to 3,000 people).\n\nA household is
a group of people residing within a home. Since the average\nnumber of
rooms and bedrooms in this dataset are provided per household, these\ncolumns may take surprisingly large values for block groups with few
households\nand many empty houses, such as vacation resorts.\n\nIt can
be downloaded/loaded using the\n
n:func: `sklearn.datasets.fetch_california_housing` function.\n\n..
